Summary

Senior Data Scientist at IBM Consulting in Energy & Utilities, focused on predictive maintenance, geospatial analytics, and KPI platforms. Supported GenAI enablement and delivered performance improvements in reporting and device monitoring.

Experience

IBM Consulting

Brussels, Belgium

Industry focus: Energy & Utilities

Senior Data Scientist

Jan 2025 – Present

- Identified a vendor software issue affecting ~50% of devices; supported a patch that resolved ~99% of impacted units.
- Contributed to predictive maintenance for a multi-million device portfolio; utilized ensemble models (XGBoost) to identify key failure features and automate intervention prioritization.
- Led resolution of ~200 incidents per month with a small team; translated analytics into actionable remediation plans with clients and partners.
- Delivered ~5 Grafana dashboards for the maintenance team and KPI reporting for project management/billing.
- Engineered high-performance KPI pipelines using SQL and TimescaleDB; optimized query performance via materialized views, reducing reporting latency from hours to ~3 minutes and cutting query runtimes from minutes to seconds.
- 3-day government-client hackathon (3rd place): built an AI chat application to advise on dispute resolution using IBM watsonx.

Data Scientist

Apr 2022 – Dec 2024

- Developed geospatial analytics pipelines using cell tower data to identify network issues across the country and inform coverage improvements.
- Partnered with stakeholders to define operational KPIs and drive data-informed decision-making for business performance.

Junior DevOps Engineer

Sep 2021 – Apr 2022

- Improved a client ecosystem on GitLab; established Angular best-practice guidelines and built a PoC to raise development quality.

Automation Intern

Feb 2021 – Sep 2021

- Implemented internal automations and evaluated RPA vendors to streamline workflows; produced documentation and training materials to support enterprise-wide adoption.

Selected Projects (Personal)

Apollo Fitness (AI Agent Ecosystem) | Python, LangChain, PyTorch, OpenAI API

2024 – Present

- Developing a fitness ecosystem using AI agents to generate personalized workout and nutrition plans.
- Implemented Agentic workflows and RAG to process user preferences and provide real-time, context-aware suggestions.
- Demoed a private prototype to a small group of testers.

Office of the Future (Client: ML6) | OpenCV, Google Cloud, Flask

2021

- Built a computer-vision prototype to analyze office occupancy and space utilization.

Talks & Teaching

- Guest Lecturer, Howest University of Applied Sciences (2025) – Delivered sessions on RAG, AI Agents, and Responsible AI for student and industry audiences.

Skills

AI & Machine Learning

Generative AI, LLMs, Agentic Workflows, RAG, PyTorch, TensorFlow, LangChain, Scikit-learn, XGBoost, Computer Vision

Data & Cloud

Python (Pandas, NumPy), SQL, TimescaleDB, Grafana, Google Cloud Platform (GCP), IBM Cloud, IBM watsonx, Git, Flask

Languages

Dutch (Native), English (Native), Hindi (Native), French (Elementary)

Certifications

- **IBM Generative & Agentic AI Foundation** (2024)
- **IBM AI Associate Data Scientist** (2022)
- **Energy, Environment and Utilities Insights and Solutions (Bronze)** (2025)
- **Trustworthy AI and AI Ethics** (2022)
- **Enterprise Design Thinking Practitioner** (2024)

Education

Howest

2018 – 2021

Bachelor's degree, New Media & Communication Technology (NMCT)

Thesis: In what situation can I use Go in an MLOps pipeline compared to Python?
